

Bayside Brews & Scoops: Weather-Driven Operations

Matthew Smith

Introduction

Bayside Brews & Scoops in Miami serves a mix of retirees and resort visitors, making daily operations highly sensitive to weather and traffic patterns.

This workflow leverages **real-time weather updates** and **AI-generated recommendations** to optimize product offerings, staffing, and marketing campaigns.

The goal is to make operations **proactive, efficient, and competitive**, ensuring a top-notch customer experience every day.

Challenges Addressed

Operational Challenges

Changing Weather Conditions: Rapid temperature or weather shifts can impact customer behavior and product demand.

Competition: Nearby eateries, bars, and kiosks compete for the same customer base, requiring quick responses.

Operational Inefficiencies: Without AI-driven guidance, product mix and staffing adjustments may be reactive rather than proactive.

How the Workflow Works

Goal: Ensure Bayside Brews & Scoops is prepared for the day by anticipating weather-driven changes in customer demand, product sales, and staffing needs.

Logic:

- The system collects **current weather data** each morning.
- AI analyzes the data to generate **operational recommendations**: which products to prioritize and how to adjust staffing.
- AI also creates **promotional messages** tailored to the day's conditions, providing a blueprint for marketing campaigns.
- By integrating weather insights, AI recommendations, and alerts, management can act **proactively**, ensuring the kiosk operates efficiently and stays competitive.

Workflow

The workflow begins with a **daily weather trigger** at 7:00 AM, which collects current weather data via an API.

AI uses this data to generate a **daily operational plan**, including product mix recommendations, staffing suggestions, and promotional messages.

All AI outputs are **combined into a daily snapshot email** sent to the manager for review.

The manager then **reviews the plan and adjusts operations**, ensuring the kiosk runs efficiently and is prepared for customer demand.

Workflow in Zapier

The screenshot displays the Zapier interface for editing a workflow. The top navigation bar includes a home icon, a Zaps icon, a status message "This Zap is using 2 Pro features", the user name "Matthew Smit...", a project name "Daily Weather-Based Operations Briefing for Bayside Brews & Scoops" with a "Draft" tag, a zoom level of "81%", and a "Help" link. Below the navigation bar is a search bar and a row of action buttons: "Undo", "Test run", and "Publish".

The main workspace shows a vertical sequence of four steps connected by plus signs:

- Step 1:** "Schedule by Zapier" with a sub-step "1. Every Day".
- Step 2:** "Webhooks by Zapier" with a sub-step "2. Custom Request".
- Step 3:** "Google AI Studio (Gemini)" with a sub-step "3. Send Prompt".
- Step 4:** "Gmail" with a sub-step "4. Send Email".

Each step has a green checkmark icon and a three-dot menu to its right. At the top of the workspace, a message states "Your Zap is ready!" with an "AI beta" tag and a "Publish" button. The bottom of the interface features a "Library" tab and several utility icons.

Ways for Further Improvement

Improving the Workflow with Advanced Tools

- **Historical Analytics:** Use tools like Tableau or BigQuery to analyze past weather and sales trends for more accurate daily forecasts.
- **Dynamic Staffing & Inventory:** Integrate POS and workforce management software to adjust staffing and product mix in real-time based on traffic and demand.
- **Automated Promotions:** Schedule AI-generated social media posts or email campaigns tailored to weather and expected customer behavior.
- **Competitor Monitoring:** Track nearby promotions with Google Alerts or AI dashboards to respond proactively and maintain an edge.

Impact: Makes the workflow **more strategic, responsive, and profitable**, helping the kiosk **adapt quickly** and optimize customer experience

Conclusion

Summary & Key Takeaways

- The workflow empowers Bayside Brews & Scoops to **proactively plan daily operations** using weather data and AI insights.
- It improves **product mix decisions, staffing efficiency, and marketing effectiveness** while maintaining high customer satisfaction.
- Alerts for extreme or changing weather conditions allow management to **respond quickly and reduce operational risks**.
- Future enhancements like **historical analytics, dynamic staffing, automated promotions, and competitor monitoring** make the system even more strategic and competitive.
- **Overall Impact:** Ensures the kiosk is always **prepared, efficient, and ahead of the competition**, delivering the best possible customer experience every day.
